a root contrast against vegetation greenness
site medians: Spearman rho 0.36, p = 0.014, n = 47 sites
group 1l excess loss (log2)
site x trip pair
site median
NDVI, 60 days before sampling
b community growth rate, root−adjacent minus bulk
106 pairs; 79% faster beside roots; site Wilcoxon p = 1.5e−05
shift in log doubling time
median
faster growers
beside roots
c 1l loss against the growth−rate shift
Spearman rho 0.22, p = 0.023; model value at zero shift −1.59
group 1l excess loss (log2)
shift in log doubling time (root−adjacent minus bulk)
d genus depletion beside roots
288 genera; 1l carriage −0.75 (p = 3e−05) given growth rate and phylum
symbol area: mean share in bulk soil
genus log2 fold change, root−adjacent vs bulk
fraction of genus representatives carrying group 1l
